

The water cycle song

Spoken:

Somewhere, out there, the sun is shining on a little puddle,
It's just part of something we call ... the water cycle

Verse 1 (The water cycle):

Water from the little puddle turns to gas, evaporation!
The gas forms into puffy clouds, condensation!
The clouds get heavy and the rain pours down, precipitation!
And more puddles on the ground ...

Chorus:

Oh, the water cycles round and round.
Vapour goes up and the rain comes down,
Water in the sky in the ocean in the ground,
It's all in a cycle going round and round.

Verse 2 (Types of clouds):

Some clouds look like a horse's tail, that's Cirrus.
Some clouds look like cauliflower, that's Cumulus.
Some clouds look like a blanket of grey, that's Stratus.
There are high clouds and low clouds and inbetween,
Fog on the ground is also rarely seen clouds, yeah, yeah, yeah ...

Chorus:

Oh, the water cycles round and round.
Vapour goes up and the rain comes down,
Water in a river, in a glass, in a cloud,
It's all in a cycle going round and round.

Middle (Types of weather):

When warm air meets cold air trouble brews,
That could mean a storm and that's bad news!
A hurricane can form when that happens near warm water,
Look out if the storm reaches land,
Get out of the way,
Grab your sons and daughters,
Crash! Bash! Boom and Kebam!
Oh no! We forgot Uncle Dan!

Spoken:

"I'm okay, I'm alright, I was just hiding in garbage can!"

Sung:

He was hiding in a garbage can!

Chorus:

Oh, the water cycles round and round.
Vapour goes up and the rain comes down,
Water in a person, in a well deep down,
It's all in a cycle going round and round.
